Fourier analysis is like a glass prism

Fourier analysis is like a glass prism

Fourier analysis in signal processing

- Fourier analysis is the decomposition of a signal into frequency components, that is, **complex exponentials** or **sinusoidal signals**.

Fourier analysis in signal processing

- Fourier analysis is the decomposition of a signal into frequency components, that is, **complex exponentials** or **sinusoidal signals**.

Joseph Fourier
1768-1830

Motivation

Question: what is our motivation to describe each signal as a sum or integral of sinusoidal signals?

Motivation

Question: what is our motivation to describe each signal as a sum or integral of sinusoidal signals?

Answer: the major justification is that **LTI systems** have a **simple behavior** with sinusoidal inputs.

Notice: the response of a LTI system to a sinusoidal is sinusoid with the **same frequency** but different amplitude and phase.

Motivation

Question: what is our motivation to describe each signal as a sum or integral of sinusoidal signals?

Answer: the major justification is that **LTI systems** have a **simple behavior** with sinusoidal inputs.

Interesting application: we can remove **selectively** a desired frequency Ω_i from the original signal using an LTI system (i.e. **“Filter”**) by setting $H(e^{j\Omega_i}) = 0$.

Notations and abbreviations

Mathematical tools for frequency analysis depends on,

- **Nature of time:** continuous or discrete
- **Existence of harmonic:** periodic or aperiodic

Notations and abbreviations

Mathematical tools for frequency analysis depends on,

- **Nature of time:** continuous or discrete
- **Existence of harmonic:** periodic or aperiodic

The signal could be,

Continuous-time and periodic

Continuous-time and aperiodic

Discrete-time and periodic

Discrete-time and aperiodic

Notations and abbreviations

Mathematical tools for frequency analysis depends on,

- **Nature of time:** continuous or discrete
- **Existence of harmonic:** periodic or aperiodic

The signal could be,

Continuous-time and periodic (freq. dom. CTFS)

Continuous-time and aperiodic (freq. dom. CTFT)

Discrete-time and periodic (freq. dom. DTFS)

Discrete-time and aperiodic (freq. dom. DTFT)

Notations and abbreviations

Mathematical tools for frequency analysis depends on,

- **Nature of time:** continuous or discrete
- **Existence of harmonic:** periodic or aperiodic

The signal could be,

Continuous-time and **periodic** (freq. dom. **CTFS**)

Continuous-time and aperiodic (freq. dom. CTFT)

Discrete-time and **periodic** (freq. dom. **DTFS**)

Discrete-time and aperiodic (freq. dom. DTFT)

Notice: when the signal is **periodic**, we talk about **Fourier series (FS)**.

Notations and abbreviations

Mathematical tools for frequency analysis depends on,

- **Nature of time:** continuous or discrete
- **Existence of harmonic:** periodic or aperiodic

The signal could be,

Continuous-time and periodic (freq. dom. CTFS)

Continuous-time and **aperiodic** (freq. dom. CT**FT**)

Discrete-time and periodic (freq. dom. DTFS)

Discrete-time and **aperiodic** (freq. dom. DT**FT**)

Notice: when the signal is **aperiodic**, we talk about **Fourier transform (FT)**.

Continuous-time periodic signal: CTFS

Continuous - time signals

Time-domain

Frequency-domain

$$c_k = \frac{1}{T_0} \int_{T_0} x(t) e^{-jk\Omega_0 t} dt$$

Everything you need to know !

Summary of Fourier series and transforms

		Continuous - time signals		Discrete - time signals	
		Time-domain	Frequency-domain	Time-domain	Frequency-domain
Periodic signals	Fourier series	 $c_k = \frac{1}{T_0} \int_{T_0} x(t) e^{-jk\Omega_0 t} dt$	 $\Omega_0 = \frac{2\pi}{T_0}$ $x(t) = \sum_{k=-\infty}^{\infty} c_k e^{jk\Omega_0 t}$	 $c_k = \frac{1}{N} \sum_{n=0}^{N-1} x[n] e^{-j\frac{2\pi}{N} kn}$	 $x[n] = \sum_{k=0}^{N-1} c_k e^{j\frac{2\pi}{N} kn}$
	Continuous and periodic	Discrete and aperiodic	Discrete and periodic	Discrete and periodic	
Aperiodic signals	Fourier transforms	 $X(j\Omega) = \int_{-\infty}^{\infty} x(t) e^{-j\Omega t} dt$	 $x(t) = \frac{1}{2\pi} \int_{-\infty}^{\infty} X(j\Omega) e^{j\Omega t} d\Omega$	 $X(e^{j\omega}) = \sum_{n=-\infty}^{\infty} x[n] e^{-j\omega n}$	 $x[n] = \frac{1}{2\pi} \int_{2\pi} X(e^{j\omega}) e^{j\omega n} d\omega$
	Continuous and aperiodic	Continuous and aperiodic	Discrete and aperiodic	Continuous and periodic	

Periodicity with “period” α in one domain implies discretization with “spacing” $1 / \alpha$ in the other domain, and vice versa.

Frequency : F (Hz)

Angular frequency: $\Omega = 2\pi F$ (rad/sec)

Normalized frequency: $f = F/F_s$ (cycles/sample)

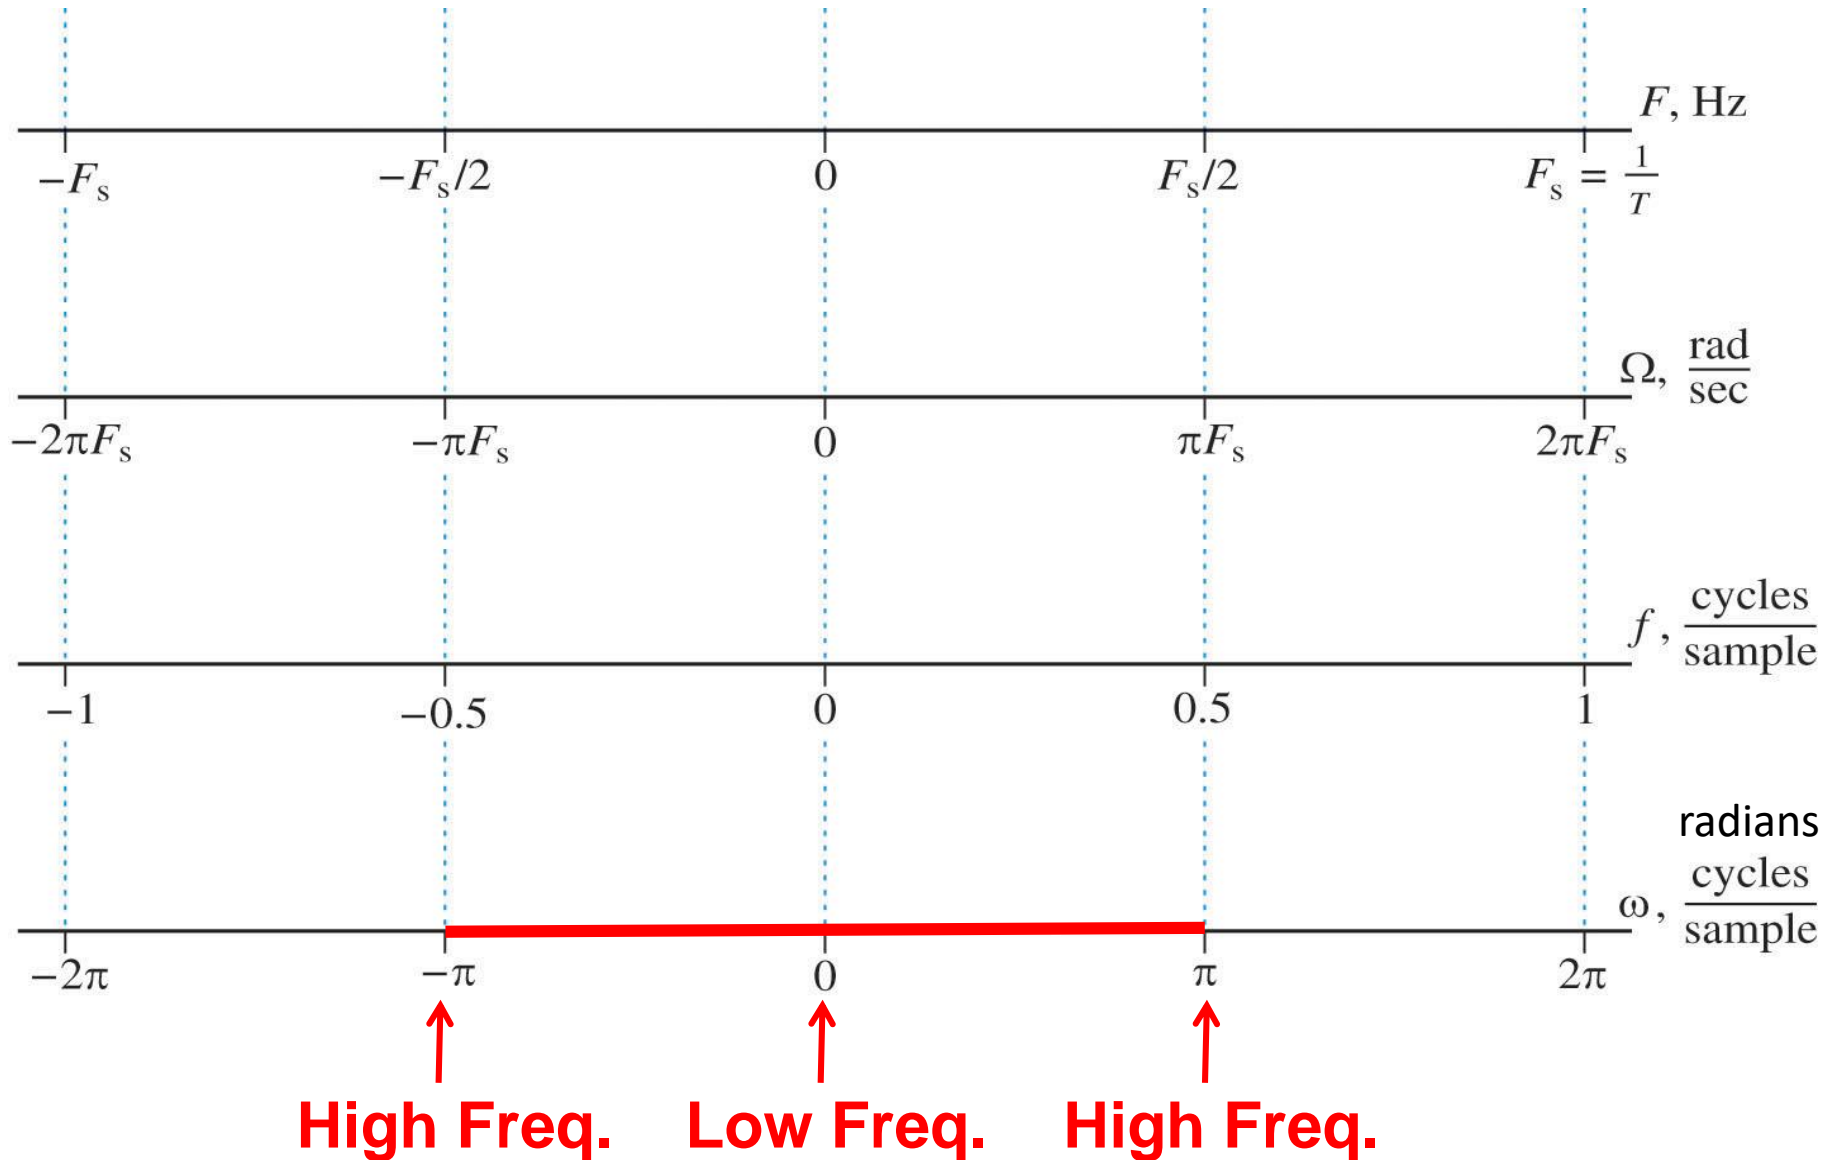

Normalized angular frequency:

$\omega = 2\pi \times F / F_s$ (radians x cycles/samples)

Normalized angular frequency:
 $\omega = 2\pi \times F / F_s$ (radians x cycles/samples)

Numerical computation of DTFS

Let $x[n]$ be periodic and $x = [x[0] \ x[1], \dots, x[N - 1]]$ includes first N sampls.

Formula

$$c_k = \frac{1}{N} \sum_{n=0}^{N-1} x[n] e^{-j\frac{2\pi}{N}kn}$$

$$x[n] = \sum_{k=0}^{N-1} c_k e^{j\frac{2\pi}{N}kn}$$

MATLAB function

```
ck = (1/N)*fft(xn) % dtfs
```

```
xn = N*ifft(ck) % idtfs
```

Example 1.1: use of fft and ifft

Example 1: Compute the DFTS of pulse train with $L=2$ and $N = 10$.

```
% signal
```

```
x=[1 1 1 0 0 0 0 1 1]
```

```
% N
```

```
N=length(x);
```

```
% ck
```

```
c=fft(x)/N
```

```
x1=ifft(c)*N
```

```
% plot x1
```

```
stem(x1)
```

```
title('ifft(c)*N')
```

Numerical computation of DTFT

The computation of a finite length sequence $x[n]$ that is nonzero between 0 and $N - 1$ at frequency ω_k is given by,

Formula

$$X(e^{j\omega_k}) = \sum_{n=0}^{N-1} x[n]e^{-j\omega_k n}, \quad k = 1, 2, \dots, K$$

MATLAB function

```
X=freqz(x,1,om) % DTFT
```

Example 1.2: use of freqz

Example 1.2: plot magnitude and phase spectrum of the following signal

Example 1.2: use of freqz

```
% signal
```

```
x=[1 1 1 1 1 1 1 1 1 1];
```

Example 1.2: use of freqz

```
% signal
```

```
x=[1 1 1 1 1 1 1 1 1 1];
```

```
% define omega
```

```
om=linspace(-pi,pi,500);
```

Example 1.2: use of freqz

% signal

```
x=[1 1 1 1 1 1 1 1 1 1];
```

% define omega

```
om=linspace(-pi,pi,500);
```

% Compute DTFT

```
X=freqz(x,1,om);
```

Example 1.2: use of freqz

```

```

```
x=[1 1 1 1 1 1 1 1 1 1];
```

```
% define omega
```

```
om=linspace(-pi,pi,500);
```

```
% Compute DTFT
```

```
X=freqz(x,1,om);
```

```
% |X|
```

```
X1=abs(X);
```

Example 1.2: use of freqz

```
% signal
x=[1 1 1 1 1 1 1 1 1 1];
% define omega
om=linspace(-pi,pi,500);
% Compute DTFT
X=freqz(x,1,om);
% |X|
X1=abs(X);
% plot magnitude spectrum
figure(1)
plot(om,X1,'LineWidth',2.5)
xlabel('Normalized angular frequency')
ylabel('Magnitude |X|')
```

Example 1.2: use of freqz

```
% signal
x=[1 1 1 1 1 1 1 1 1 1];
% define omega
om=linspace(-pi,pi,500);
% Compute DTFT
X=freqz(x,1,om);
% phase
p=angle(X);
% plot phase spectrum
figure(2)
plot(om,p,'LineWidth',2.5)
xlabel('Normalized angular frequency')
ylabel('Phase')
```

Example 1.3: use of freqz

Example 1.2: plot magnitude and phase spectrum of $x[n] = 0.6 \times \text{sinc}(0.6n)$ for $n = -200:1:200$.

Example 1.3: use of freqz

% time t or n

```
t=-200:1:200;
```

Example 1.3: use of freqz

```
% time t or n
```

```
t=-200:1:200;
```

```
% signal
```

```
x=0.6*sinc(0.6.*t);
```

```
% plots signal
```

```
figure(1)
```

```
plot(t,x,'LineWidth',2.5)
```

```
title('x')
```

Example 1.3: use of freqz

```
% time t or n
t=-200:1:200;
% signal
x=0.6*sinc(0.6.*t);
% plots signal
figure(1)
plot(t,x,'LineWidth',2.5)
title('x')
% define omega
om=linspace(-pi,pi,500);
% compute DTFT
X=freqz(x,1,om);
```

Example 1.3: use of freqz

```
% time t or n
t=-200:1:200;
% signal
x=0.6*sinc(0.6.*t);
% plots signal
figure(1)
plot(t,x,'LineWidth',2.5)
title('x')
% define omega
om=linspace(-pi,pi,500);
% compute DTFT
X=freqz(x,1,om);
% plot magnitude spectrum
figure(2)
plot(om,abs(X),'LineWidth',2.5)
```

Example 1.3: use of freqz

```
% time t or n
t=-200:1:200;
% signal
x=0.6*sinc(0.6.*t);
% plots signal
figure(1)
plot(t,x,'LineWidth',2.5)
title('x')
% define omega
om=linspace(-pi,pi,500);
% compute DTFT
X=freqz(x,1,om);
% scale it by factor pi
figure(2)
plot(om/pi,abs(X),'LineWidth',2.5)
```

Example 1.4: use of freqz

Example 1.2: plot magnitude and phase spectrum of $x[n] = 0.6 \times \text{sinc}(0.6n)$ for $n = -200:0.1:200$.

You should scale `freqz(x,1,om)` by **Ts** (i.e. $X = Ts * \text{freqz}(x,1,om)$).

More details in the future sessions...

Main application of freqz(b,a,om)

$$H(z) = \frac{B(z)}{A(z)} = \frac{b(1) + b(2)z^{-1} + \dots + b(n)z^{-(n-1)}}{a(1) + a(2)z^{-1} + \dots + a(m)z^{-(m-1)}}$$

Main application of freqz(b,a,om)

$$H(z) = \frac{B(z)}{A(z)} = \frac{b(1) + b(2)z^{-1} + \dots + b(n)z^{-(n-1)}}{a(1) + a(2)z^{-1} + \dots + a(m)z^{-(m-1)}}$$

For $z = e^{j\omega}$ one can write,

$$H(e^{j\omega}) = \frac{B(e^{j\omega})}{A(e^{j\omega})} = \frac{b(1) + b(2)e^{-j\omega} + \dots + b(n)e^{-j(n-1)\omega}}{a(1) + a(2)e^{-j\omega} + \dots + a(m)e^{-j(m-1)\omega}}$$

Main application of freqz(b,a,om)

$$H(z) = \frac{B(z)}{A(z)} = \frac{b(1) + b(2)z^{-1} + \dots + b(n)z^{-(n-1)}}{a(1) + a(2)z^{-1} + \dots + a(m)z^{-(m-1)}}$$

For $z = e^{j\omega}$ one can write,

$$H(e^{j\omega}) = \frac{B(e^{j\omega})}{A(e^{j\omega})} = \frac{b(1) + b(2)e^{-j\omega} + \dots + b(n)e^{-j(n-1)\omega}}{a(1) + a(2)e^{-j\omega} + \dots + a(m)e^{-j(m-1)\omega}}$$

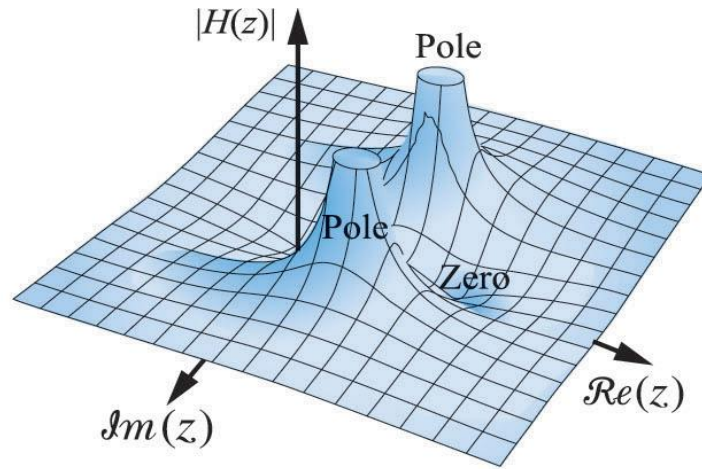

`b = [b(1),...,b(n)]; % vector b numerator`

`a = [a(1),...,a(n)]; % vector a denominator`

`om=linspace(-pi,pi,k); % desired frequency range`

`H=freqz(b,a,om); % system frequency response`
